

# Financial-Economic Verification

**BOCS Foundation**  
For the 2017 CO<sub>2</sub>e-emission prevention report

**Date: 26th Oktober 2018**

**László Károly**  
Mechanical engineer, Economist,  
MBA, iCC expert

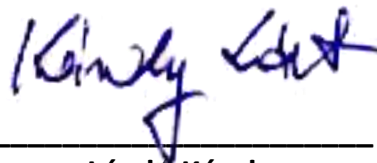

Referring to the BOCS Foundation's 2015-2015 CO<sub>2</sub>e-emission prevention report, its appendices and annexes, the calculations based on them, and the result of

6 529 tCO<sub>2</sub>e

emission prevention figure is the consequence of the expenses of the BOCS Foundation's projects stated in the annexes, which are also published in the financial reports. I have checked the related calculations, and they are well-founded and correct.

The sums of these expenses have reached their environmental goals the way it was described in the report, and are suitable for the VCU's (Voluntary Carbon Units) to be listed at the registrar in order to create QFPC™

with respect to a total of 6 529 pcs (VCU).
