

## **Professional Recommendation for BOCS Foundation**

### **About significance of the availability of conscious family planning in climate protection**

Climate change threatens the lives and health of millions of people, so rapid emission reductions and mitigating the causes and consequences of climate change requires immediate action. Making available responsible family planning tools and the related knowledge in the world can reduce population growth, which has outstanding humanitarian, climate protection and environmental benefits. Through a number of processes, it helps people and communities to a large extent, mitigates overconsumption, the speed of climate change, its social and ecological consequences, and the difficulties of adaptation, contributes to sustainability, positively affects the social, environmental and economic pillar of sustainability. Making widespread availability of conscious family planning improves the life prospects of humanity significantly.

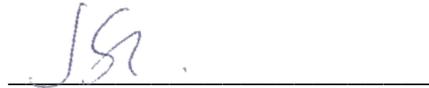

The availability of conscious and responsible family planning tools and related knowledge, girls' education improves child health and mother's health, improves women's equal opportunities, public health and public security, helps combat poverty and significantly improves the life prospects of growing generations. As a result of this, the children who are consciously and affectionately can grow in love, attention, in a better family situation, receive more spiritually and mentally from their parents, and have a better psychic status.

The possibility of contraception reduces ecological problems at the level of prevention. It promotes peace by reducing the struggles for natural resources, like drinking water resources, land, energy and other natural resources. Conscious family planning reduces greenhouse gas emissions through reduced consumption and energy consumption, and thus has a significant impact on climate protection, contributing to mitigating the effects of global climate change.

Because of climate change and its implications, it is necessary to have efficient and wide-ranging practical implementation of available solutions. Among them, conscious, responsible family planning, making widespread availability of contraception, which is one of the main topics of the BOCS Foundation's activity, is an extremely important method that can be applied in many countries. It is also cost-effective, because it can be used to achieve significant social, environmental and environmental goals through small investments.

Facilitating the widespread availability of conscious family planning is also a humanitarian, ecological, and climate protection commitment that significantly improves the life prospects of humankind.
